■ 概述

HT876是一款立体声D类和AB类音频功率放大器。在D类模式, $V_{DD} = 9.0V$ 、THD+N=10%、 4Ω 负载、1kHz信号条件下, 能连续输出 $2 \times 10.9W$ 功率。

HT876具有可任意配置的限幅(Limiter)功能。限幅功能开启后, 即使输入信号很大, 音乐输出也能被限制在指定的功率和THD+N之内, 满足不同音质体验和保护喇叭的需求。

HT876还具有自动限温控制(TFB)功能, 在高功率输出、高环境温度、AB类模式低效率等情况下导致芯片片内温度较高时, 芯片能自动降低系统增益, 避免芯片进入过温关断保护模式, 在保证音乐品质的前提下显著提升音乐峰值功率。

此外, HT876内部集成免滤波器调制技术, 能够直接驱动扬声器, 内置的关断功能使待机电流最小化, 还集成了输出端过流保护、片内过温保护和电源欠压异常保护等功能。

■ DESCRIPTION

HT876 is a stereo Class D and Class AB audio amplifier, which can deliver 2×10.9W (4Ω Load, BTL mode) power at the condition of VDD = 9.0V, THD+N = 10%, 1kHz sine wave in Class D mode.

HT876 integrates adjustable Limiter Function, which can be set by a resistor at the LIM pin to ground or AVDD, so that the output music can be limited below the preset power and THD+N.

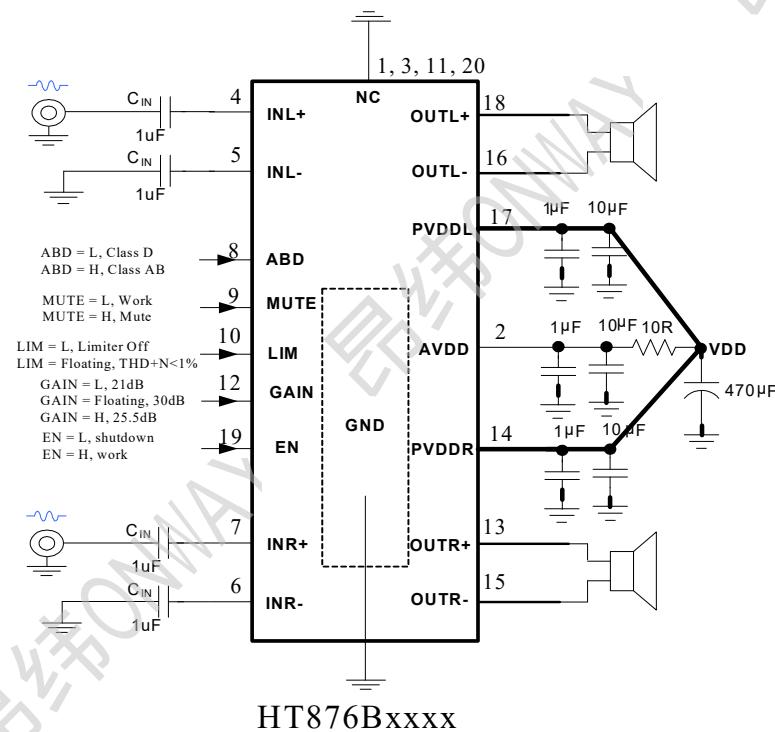

The HT876 Thermal Foldback (TFB) is designed to protect the HT876 from excessive die temperature in case of the device being operated beyond the recommended temperature or power limit (more easily happened in Class AB mode), or with a weaker thermal system than recommended. The TFB works by reducing the on-die power dissipation by reducing Gain if the temperature trig point is exceeded, so that the peak audio power is significantly increased.

HT876 has a filter-less modulation circuit which can directly drive speakers. HT876 can be shut down so that the power consumption can be minimized. As for protection function, over temperature protection function and low supply voltage malfunction preventing function are also prepared.
